

Maco C-TS Flood Door Lock

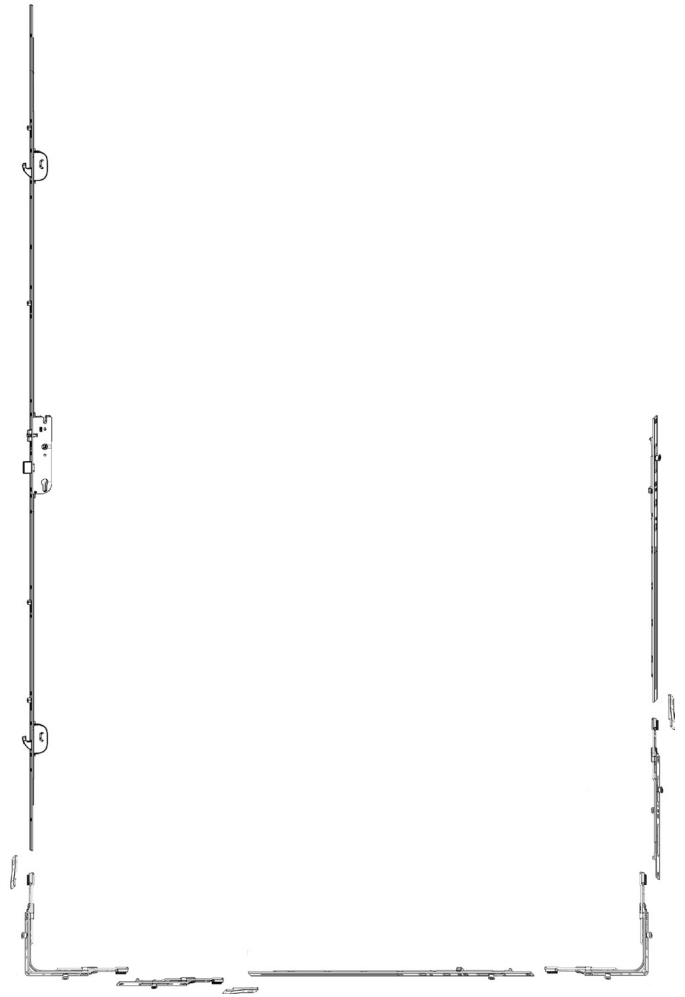

A door locking solution to reduce the impact of flooding

The MACO C-TS Flood Door Lock reduces the impact of flooding by making the door weathertight, secure and preventing water ingress.

With MACO patented i.S Mushroom strikers for compression, weathertightness and security, the flood solution provides perimeter locking around the threshold and hinge side of the door. All locking points are engaged every time the lock is operated to ensure flood protection.

It is assembled using standard stock components from MACO Protect and MACO MULTI-MATIC range. This means no additional components need to be stocked and therefore no additional storage of components is required. Lead times are greatly reduced due to the use of standard stock items.

The lock is suitable for both residential and commercial properties - minimal handle force is required to operate the door, making it ideal for elderly and those less able. It provides smooth reliable action time after time.

Key Product Features

- 16mm faceplate
- 35 and 45mm backsets available
- Individual keeps
- Lever or Split Spindle operation options available
- 10 year MACO mechanical guarantee.

Technical information

Testing & Accreditation

- PAS 24 Compliant
- PAS 1188.1:2009 Compliant

C-TS Door Lock

- Endurance tested to 50,000 operations
- MACO Silver look surface treatment tested to 480 hrs Class 5 EN 1670 for corrosion resistance
- Available with MACO Tricoat Plus surface finish tested in excess of 2000 hrs Class 5 EN 1670 for corrosion resistance

2 Hook 4 Roller Cams
