

Roto HTB 108 Hinge

Suitable for PVC and Timber profile systems.

The Roto HTB 108 hinge benefits from efficient installation as they are supplied pre-assembled, ready to fit. A patented anti-jemmy device is supplied as standard and the sash cover cap is fully protected against manipulation.

The pin module and cylindrical pins are made of stainless steel while the PVC bearings are manufactured so that no maintenance is required.

The hinge features an interior adjusting scale above the adjusting-carriage. One-man adjustment of the door is possible with this hinge and it can also be adjusted once installation is complete.

Factory presettings are available upon request.

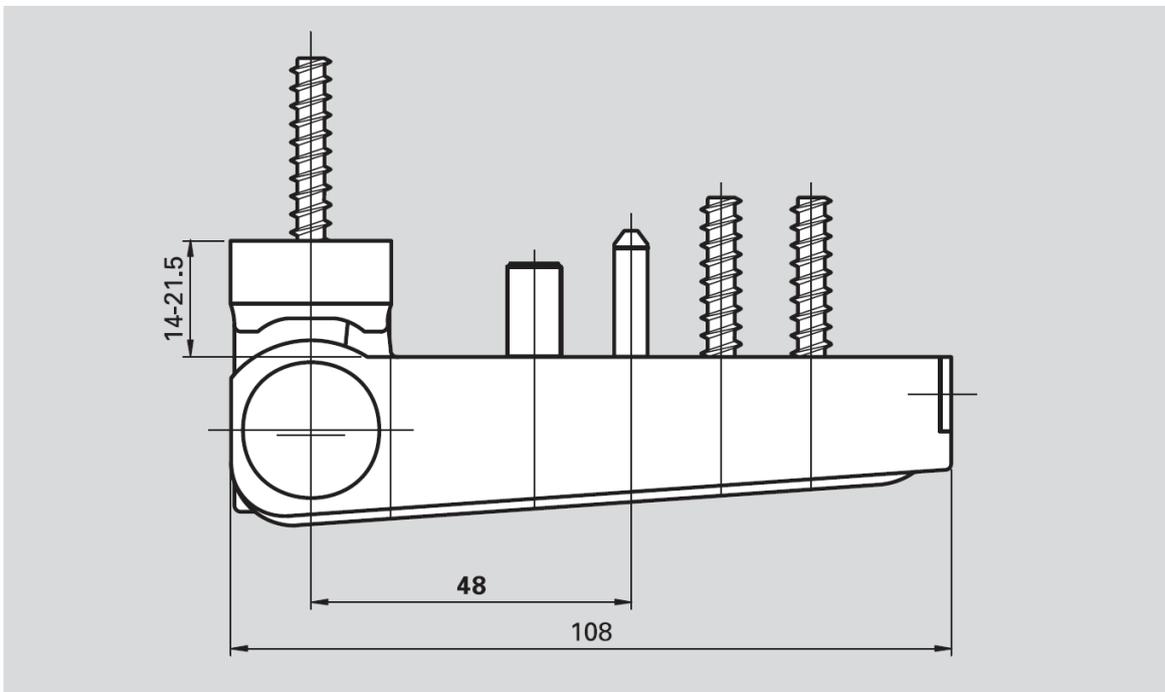

Key Product Features

- For main entrance doors of up to 120 kg
- For inward and outward opening doors
- Suitable for all conventional PVC and timber profile systems
- For overlap heights between 16.5 and 19mm without spacer elements
- Dual handed
- Standardised 5 mm drilling-hole diameter

Technical Information

Adjustment:

- Additional gasket compression adjustment of ± 0.5 mm by turning the pin module in the frame component.
