

Yale Conexis L1 Keyless Smart Lock

Keyless locking, an ideal solution for retro fit

The Yale Conexis L1 Keyless Locking System is ideal for retro fit and is engineered for easy installation - it only takes a screwdriver, smartphone and 20 minutes.

With the Conexis L1 the customer's smartphone is now their key (compatible with both Apple and Android devices). Using the smartphone app the customer is able to send mobile keys - they can choose to give access for a few weeks or hours (5 mobile keys are included). The app also gives the peace of mind of knowing who is home - customers receive a notification when the keys are used. Key cards, key tags and phone tags are also available and, along with mobile keys, can be revoked in an instant.

The Yale Conexis L1 is powered by 4 x AA batteries and gives a warning when they are running low. In the event of flat batteries a 9v battery connection port can be used to power the keyless locking system.

The Conexis L1 has a tamper alarm which deters potential intruders with a loud alarm and has a three minute lock out if an incorrect card tag is presented five times.

It connects with Yale's Smart Alarm and CCTV range as well as other leading Smart Home Systems.

Key Product Features
