

FUHR Door Locks

859

Type 15, Type 17 & Type 19

- Reversible latch and deadbolt
- Latch retention snib to avoid lockout
- Variable handle height – supplied at 1020mm (Type 17 & 19) or 1050mm (Type 15)
- Corrosion resistant "Silver" plated surface
- Profile related locking plates

FUHR MultiSafe multi-point door locks are renowned for their ease of use, reliability and durability. Profile specific keeps ensure secure fastening to the outer frame.

FUHR's 859 series ingenious split spindle design only requires one spindle which is "split" allowing the user to determine the lock operation by the handle used. The two part design of the spindle allows Lever / Pad operation only allowing the latch only to be released from the outside by the key, not the handle. Alternatively a single piece spindle can be used with the lock allowing lever operation from inside and outside.

The FUHR 859 Type 15, known as the "Trade Lock" features two hooks, two outboard rollers, reversible latch and deadbolt. The lock has been designed to be highly price competitive. The hooks, which resist attempts at forced entry, are smaller than standard FUHR hooks but still offer the same throw. With less than 180mm between the hook and roller, the hook takes none of the load when compressing the weatherseal as the door is closed; this ensures that the operation of the lock remains simple and reliable with minimum force. The total distance between the outer locking points is larger than standard locks to ensure that the corners are protected.

The 859 Type 17 and 19 provide 2 hooks and 4 rollers and are ideal for taller and shorter doors respectively due to the positioning of the outboard locking points. All locks are provided with an extended drive rail for optional shootbolts.
