

# FUHR

## Door Lock Keeps

A full range of system specific locking plates designed to suit your profile. The plates are all custom engineered to ensure they accurately fit your profile system without any need for additional end caps or packers. The integral end caps and design of the steel u-rail ensure that the plate is in the correct position every time.

The fixing screw hole positions are specifically configured for each profile, and ensure where possible that the screws always fix into reinforcing. Adjustment features are designed into many of the plates to ensure optimum compression and weathersealing. With locking plate suites for over 200 PVCu, timber and composite profile systems, FUHR have a secure and user-friendly solution for all applications.

## Door Security

Page 116

**How to hand FUHR door keeps**

In order to determine the handing of FUHR door keeps you view the closed door from the hinge side. If the door is hung on the right side, you will require a right hand keep.

**Adjustable Round Bolt Plate**

Profile specific

Adjustable + / - 1.5mm

Use pozidrive screwdriver

Non handed

Locks master and slave door

Integral plastic buckets

Requires profile related underplate

**Single Shoot Bolt Plate**

Adjustable + / - 2.0mm

Underplate is handed left or right

Optional plastic bucket available

Requires profile related underplate

**One and Two Piece Keep Plates**

Incorporating all the features and benefits of FUHR striker technology these keeps will save time in the factory and for installers. The one and two piece plates are profile related; they locate accurately and reliably, with complete integrity between the different locking points. The adjustment ensures the right compression and weathersealing.

The One Piece Keep is compatible with the FUHR 856 and 859 Type 3 door locks. The Two Piece Keep is compatible with the FUHR 856 and 859 Type 6 door locks.

Profile specific

Adjustable + / - 1.5mm for Hook

Adjustable + / - 2.0mm for Latch Plate

Handed left or right
