Sales

- 7 locking points providing security
- Keep children and pets secure
- Retain element of security while talking to a guest
- Standard 92mm PZ furniture can be used
- Existing FUHR multisafe keeps can be used
- Variants available for PVCu or Timber/Composite doors, and Tall doors
- Lever or split spindle operation for top sash. Key operated bottom sash

### Hardware Required:

- 1 x 855 Stable door bottom section (1 hook, 1 roller)
- 1 x 859 Stable door top section (1 hook, 1 roller)
- 2 x profile cylinders (1 with escutcheon plate and 1 with a lever handle set)
- 2 x guide plates
- 4 x door hinges
- Existing FUHR keeps

FUHR Stable Door gearing consists of 2 locking mechanisms, which can operate independently or in tandem. A purpose designed right angle bracket provides added strength to the interlocking sashes.

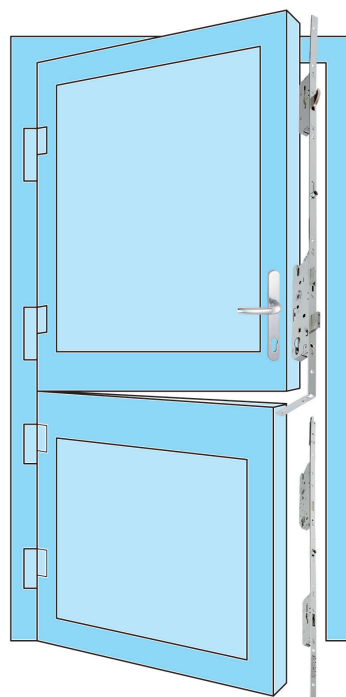

The top section, a lever/lever or split spindle operation lock, incorporates a hook, roller, latch and deadbolt.

The lower section is key operated and also incorporates shootbolt, hook, roller and a key operated deadbolt (855 type) but no latch.

### Operation:

To operate as a normal single door: unlock both cylinders to retract the deadbolts and push the lever to disengage locking points. When the bottom section is unlocked by the cylinder, the top shootbolt is thrown which connects to the top section.

To operate as Stable door: unlock the top section cylinder to retract the deadbolt and push the lever to disengage the locking points. The top section of the door can then be opened independently.
