

Ingenious Door Locks

Professional and Duplex

- Serrations to allow for shootbolt extensions
- Dual spindle gearbox
- One piece keeps are supplied as standard
- French Door options available

Designed in Great Britain, the Ingenious door lock range offers peace of mind on security and reliability. The complete range of multipoint door locks are supported by a comprehensive Fit and Forget 10-year guarantee.

All of the door locks feature a state of the art central gearbox designed with a smooth operating, unsprung follower. The dual follower gearbox means that either lever/lever or lever/moving pad (dual follower) operation can be achieved. An ergonomically designed hold back snib on the faceplate can be used to prevent accidental lock outs.

Single keeps are supplied with the door locks as standard.

The Professional range caters for most standard door lock requirements, featuring 3 hooks, reversible latch and top/bottom serrations to allow for shootbolt extensions to increase security.

The Duplex offers an impressive 5 hooks, reversible latch and top/bottom serrations to allow for shootbolt extensions to further increase security. The ingenious double, bi-directional hook feature offers impressive additional strength.

To suit timber and composite profiles, these door locks have a 45mm backset, 20mm faceplate and radius ends.
