

MACO

Colonial Door Lock

- Key operated
- High cylinder height to suit traditional style doors

The innovative Colonial door lock from MACO has been designed to provide more traditional rim style locking but with the security benefits of a multipoint locking system.

Unlike typical multipoint door locks, the latch and deadbolt section is featured as the highest locking point providing a cylinder height of 1595mm. Two further pin bolt locking points are located at the centre and bottom of the door lock. Additional security can be provided by fitting shootbolts to serrations at the top and bottom of the faceplate.

The Colonial door lock is key operated and should be used with a Euro thumb turn cylinder and security escutcheon plate, no handle set is required.

A manual sliding snib for latch retention prevents the door from latching when in constant use while the MACO soft latch is standard, providing smooth door closing.

All MACO products are supplied with the Tricoat Plus coating as standard providing 1,000 salt spray testing to BS EN 1670.

Technical Information:

- Faceplate: 16 or 20mm
- Backset: 35 or 45mm
- Cylinder height: 1595mm
