YEARS

- Inline peg or cranked peg variants
- Back to back or bolt fixing
- Manufactured in austenitic 316 stainless steel

This modern pull handle offers an upmarket, contemporary design. Manufactured to the highest possible standards, the Elite T-Bar Pull Handle suites perfectly with the Elite Escutcheon and Elite Central Knob.

The handle is available in two fixing versions, bolt fix or back to back fixing. The bolt fix variant is particularly useful if the door does not have solid timber core.

A cranked design is also available for applications where increased frame and hand clearance is required.

### Technical Information:

#### Bolt Fix:

One pull handle on one side of the door only. Cover caps are on the other side of the door to cover fixings.

#### Back to Back:

Pull handles fitted to both sides of the door.

Fixing pegs are supplied with machined brass inserts as standard. The M8 bolt has the option of a clear washer to protect the face of the door.
